EDUCATION

Liberty University | Bachelor of Science, Data Analysis and Administration

Liberty University | Associate of Arts, Criminal Justice

AI And Computer Engineering | Associate of Science (Expected 01/2028) | Masters Pro Scholarship

PROFESSIONAL SUMMARY

Dynamic Data Architect and Operations Specialist specializing in symbolic mathematics, formal verification, and high-performance analytics. Expertise in engineering robust data persistence layers and automated reasoning systems using Python, SQL, and SQLAlchemy. Expert at optimizing DevOps workflows and operational logistics, ensuring secure, scalable data pipelines and tracking complex telemetry datasets into clean, interactive visualization dashboards for critical compliance auditing.

TECHNICAL SKILLS

- **Languages & Frameworks:** Python (SymPy, NumPy, Pandas, Matplotlib, Streamlit), SQL, SQLAlchemy, Bash Scripting, JavaScript (WebGL)
- **Systems & Tools:** Linux / Unix Systems, Git & GitHub, Advanced Excel (XLOOKUP, Nested Frameworks), CI/CD Pipelines
- **Core Competencies:** Data Analysis, Business Intelligence, Data Architecture, Operations Management, Regulatory Compliance

WORK HISTORY

LEAD IOT ARCHITECT & OPEN SOURCE DEVELOPER — Algebraic Analytics Portfolio | Online (02/2024 – Present)

- **Facility Energy Analytics:** Engineered an automated auditing pipeline tracking root-mean-square voltage (V_{RMS}) stability against fluctuating peak loads (up to 4.5 kWh), processing raw multi-axis telemetry datasets via Anaconda to render live consumption matrices.
- **AI Evaluation & Data Benchmarking:** Developed programmatic data verification pipelines for Google APIs to track, model, and parse critical model accuracy metrics against verified human performance baselines.
- **Automated Logic & Engineering:** Authored Core, a high-performance mathematical verification engine leveraging advanced row reduction and data transformation logic to completely automate complex symbolic processing operations.
- **Environment Configuration & CI/CD:** Architected and maintained rigorous version control infrastructures via Git/GitHub while optimizing Linux staging environments to guarantee 100% data ingestion reliability.
- **3D Data Analytics & Mesh Rendering:** Constructed an interactive WebGL 3D visualization engine mapping real-time power grid fluctuations, correlating structural metrics (V , Ohms, ms) to isolate transient degradation spikes during battery health audits.

MANAGER AND VICE PRESIDENT — Aquarius Heavy Towing LLC | Phoenix, AZ (03/2020 – 10/2025)

- **Operations Management:** Supervised end-to-end service logistics, fleet deployment frameworks, and time-critical asset allocations under intense, high-pressure operational environments.
- **Compliance & Legal Integrity:** Directed strict compliance workflows for commercial certifications, heavy liability documentations, and regional/federal Department of Transportation regulatory codes.
- **Financial Oversight & Bookkeeping:** Enforced absolute structural isolation of operational records from corporate financial ledgers, managing complex account reconciliations and real-time ledger audits.
